

QUALITY POLICY

Nitronics Ltd is committed to providing a competitively priced, consistently high quality kitting and component supply service, focused on our customers' expectations and requirements.

Our objective is to implement, maintain and continually improve our processes for stocking and distribution of electronic components, with full traceability, by achieving error free service levels to our customers. We achieve this objective through product quality and effective processes delivered by our well trained, informed and enthusiastic staff.

The Quality & Projects Manager has responsibility for monitoring the day-to-day activities of the Quality Management System (QMS) activities and for ensuring compliance to the processes and procedures that associated with the product/service quality performance. Compliance is measured by Internal Audit and other control methods presently in place.

We recognise that in order to achieve this, its ISO9001:2015 QMS must be continually evolving and improving and in order to meet this objective, we review our ongoing business and quality objectives on a regular basis and they are formally addressed through the Management Review process.

We know that the application of our Quality Policy is a never-ending priority, and we see it as central to our future development and growth.

This Quality Policy is communicated and understood throughout our organisation so that all our staff are aware of the company's commitment to quality, safe working and environmental responsibility and the importance of their role in contributing to company success.
